

What is a research study?

A research study is a scientific study that evaluates the safety and effectiveness of investigational medical interventions, drugs, or devices. The Food and Drug Administration (FDA) requires the safe and satisfactory completion of research studies before it will approve a treatment for public use.

Tips for a positive clinical experience

- Read all information carefully
- Ask questions about procedures and requirements
- Understand your responsibilities as a study participant
- Communicate openly with the study coordinator and physician
- Arrive on time for appointments or call ahead if you have to reschedule

What are my options for this study?

We are conducting a research study that will measure whether the investigational medication will improve breathing.

You may qualify for this research opportunity if you:

- Have been diagnosed with COPD
- Are at least 40 years old
- Are a current or previous smoker
- Do not have a history of asthma

All study-related care, including physical exams, lab services and study medication are provided at no charge. Compensation for time and travel may be provided.

Are you or someone you know

Living with
COPD

Can our investigational drug help with breathing...

**Help us find out
by participating
in this study**

What is COPD?

Chronic obstructive pulmonary disease, also known as COPD, is a chronic disease that makes it harder to breathe. COPD can cause wheezing, cough, shortness of breath, chest tightness, among other symptoms. It is a progressive disease, meaning that it gets worse over time.

Tips for living with COPD

Staying active, exercising and eating right* will keep your body strong and help manage your condition. Below are some easy, everyday tips that will reduce the symptoms of your COPD and help you get back to the life you want:

- Take your medication as instructed by your healthcare professional.
- Wear loose fitting clothes to allow you to breathe easier
- Wear clothes and shoes that are easy to put on.
- Slow down and talk less during meals.
- If necessary, don't be afraid to ask family and friends for help to make your life easier.

* Check with your doctor before starting any new exercise or diet program

Should I volunteer?

Volunteers are important to the clinical study phase of the drug approval process. As a volunteer, you are the most critical link in a long chain of further research in the development of future treatments for COPD.

Each year thousands of people volunteer to participate in research studies. As a volunteer, you may:

- participate in a research process that may lead to new therapies
- learn new information about COPD, receive study-related care and be seen regularly by the study doctor
- have a positive impact on the health and future of people with COPD

Volunteering to participate in a research study is one of the best ways you can contribute to the understanding of diseases that affect people in your community.
